AUDIOGRAM RESULTS Form 411

Must be given to the worker within one month of the date of the test being completed.

Section A – Details

Name

Date

Employer name

(dd/mm/yyyy)

Tester name

Here are the results of your hearing test and what they mean.

What is an audiogram?

An audiogram shows the softest level at which a person can hear a range of different pure tones.

Here is your audiogram

Section B – Audiogram

Normal
Hearing

Conversational
Speech Range

dB(A)	Exposure Time
90	8 hours
102	30 mins
111	3 mins
114	2 mins

The softest sounds that you responded to are marked O for the right ear an X for the left ear. These are your hearing threshold levels.

As a benchmark, normal hearing falls between 0 and 20 dB.

Degrees of hearing loss:

Mild loss	25-45 dB
Moderate loss	50-65 dB
Severe loss	70-90 dB
Profound loss	95 dB+

All the major sounds of speech are contained within the audiogram range. The approximate volume and pitch of various speech sounds are shown on the audiogram above. This may give you an indication of the sounds you hear less clearly.

You have three months from the date of receiving these results to notify WorkCover WA that you wish to disagree with the results.
